were indirectly supported by the dairy industry through suppliers and the indirect impact of the industry's expenditures.

DAIRY MATTERS

Dairy foods deliver a unique combination of nine essential nutrients including protein, vitamin D and potassium.

The Dietary Guidelines for Americans recommend three servings of low-fat and fat-free dairy foods per day.

Consuming dairy products provides health benefits, especially improved bone health.

Dairy foods provide about 67 percent of the calcium available in the U.S. food supply.
